

DataMigration Standards for Windchill - Bug #50

Develop a Windchill customization to create object links—such as OwnerLinks, ContentLinks, DescribeLinks, and others

Description			
Develop a Windchill customization to create object links—such as OwnerLinks, ContentLinks, DescribeLinks, and others—based on data provided in CSV files. The solution should parse the CSV input, map the entries to the corresponding Windchill objects, and establish the appropriate relationships between them. It should also include validation of input data, error handling, and logging to ensure accurate and reliable link creation.
